

REMARKS

Applicant respectfully requests that a second preliminary amendment be made to the above-entitled application. By separate letter to the Official Draftsperson, substitute sheets 1 and 2 of the drawings are enclosed together with marked up copies showing the changes.

The specification has been amended to clarify the description of Fig. 1 as being prior art having a conventional bolt face 31.

The specification and drawings have also been amended to add missing reference numbers, to further clarify the description, make minor corrections and to properly show the extractor, which was inadvertently omitted or incorrectly depicted in some views, without adding new matter.

The extractor was correctly shown in provisional application 60/417,522 under which the instant application claims priority. The Examiner's attention is invited to Figs. 2-6 of the subject provisional application (cover page and drawing sheet enclosed). This shows that the correction to the extractor is not new matter.

Claims 1-4 have been amended to more clearly define the invention by reciting the extractor in independent claim 1 as part of the characterizing portion of the claim. Claim 5 has been indicated as "Previously Presented" because it was amended under PCT Article 19 before entering the U.S. National Stage.

Applicants believe no fees are due with the filing of this Amendment; however, if it is determined that a fee is required, please charge our Deposit Account No. 13-0235, maintained by Applicant's attorney.

Respectfully submitted,

By
